Don Saxton

Project Manager – Bigfork Custom Woodworks

To Prospective Clients of GSS Electric:

I started the Martel construction custom wood shop 15 years ago and have been constantly expanding and upgrading throughout the years.

Geof has been involved in all our expansions and trouble shooting for basic wiring and three phase equipment which involves knowledge beyond basic wiring.

I have used other electric contractors from time to time and have usually felt afterward that the job could have been thought out or executed better. I have never felt that way after having Geof on board. With his knowledge base he was able to present cost saving ideas that still met our needs.

In our recent expansion we added approximately \$300,000.00 of used equipment and a finish facility.

GSS electric not only met our schedule as we continued shop production for all but a short shut down period, but was there when problems arose with broken down equipment by working after hours and weekends if needed.

I am happy to say that throughout the course of a rather complex project with lots of unknowns, there were minimal extra costs involved. Geoff and his construction foreman Don Weatherston were sticklers for quality and detail.

We will continue to use GSS electric in the future and do not hesitate to recommend them.
